

# CITYBANAN – COMMUTER TRAIN TUNNEL

**Project Description**

Citybanan is a double-track railway with two new stations that is to be built in an approximately six km long tunnel between the commuter station Stockholm south and Tomtebodavägen. The Citybanan is being constructed in order to solve capacity problem for rail traffic through Stockholm. It will be used by the commuter train services. Other services will continue to run on the existing two tracks via Stockholm Central station.

between Söder Mälarstrand – Årstabron. The rock tunnel is a 600 m long double-track tunnel and a parallel service tunnel and also two access tunnels. Technical challenges are e.g. low rock cover, passages crossing close to existing tunnels and buildings.

**Customer**

Swedish Railroad Administration

**Location**

Stockholm

**Period**

2003-2012

**Services provided**

Design and documentation for tendering  
 Technical support during construction

**Scope of Services**

Ramböll has undertaken to establish design, documentation for administration and tendering and also technical support during construction for the lot
